

WHAT IS CLAIMED IS:

1. A conductive liquid crystal device,  
comprising: a pair of oppositely disposed electrodes  
and a liquid crystalline organic layer disposed  
between the electrodes, wherein the organic layer has  
plural regions having mutually different electro-  
conductivities.

2. A device according to Claim 1, wherein said  
plural regions have different alignment states of  
liquid crystal molecules.

3. A device according to Claim 2, wherein said  
different alignment states of liquid crystal molecules  
have been formed by laser light irradiation of the  
liquid crystalline organic layer.

4. A device according to Claim 2, wherein said  
different alignment states of liquid crystal molecules  
have been formed by voltage application to the liquid  
crystalline organic layer.

5. An organic electroluminescence device  
comprising: a conductive liquid crystal device which  
includes a pair of oppositely disposed electrodes and  
a liquid crystalline organic layer disposed between  
the electrodes, wherein the liquid crystalline organic

layer has plural regions having mutually different alignment states resulting in different luminances of luminescence from the device.

- 5        6.    An organic electroluminescence device  
comprising: a conductive liquid crystal device which  
includes a pair of oppositely disposed electrodes and  
at least two organic layers disposed between the  
electrodes, wherein said at least two organic layers  
10    include at least one liquid crystalline organic layer  
having plural regions of different electro-  
conductivities resulting in different luminances of  
luminescence from the device.
